**prisma informatik reaches the first milestone toward achieving the
“Certified for Microsoft Dynamics” accreditation**

**prisma informatik’s software solution NAVdiscovery passes solution test
on its way earning the “Certified for Microsoft Dynamics“ designation**

Nuremberg, Feb 26th 2013. prisma informatik announced today that its NAVdiscovery, a QlikView connector for Microsoft Dynamics NAV, has passed the Software Solution Test for Microsoft Dynamics, which is a major requirement for Certified for Microsoft Dynamics® status.

Certified for Microsoft Dynamics is Microsoft Corporation’s highest standard for partner-developed software. This certification represents a significant step in elevating the standard for partner-developed software solutions for industry-specific business applications. Solutions with a successful software test have demonstrated development quality and compatibility with the Microsoft Dynamics product. VeriTest Software Testing Services performed independent and rigorous testing on the solution’s integration with Microsoft Dynamics. prisma informatik GmbH has also earned the Microsoft Certified Partner designation with the ISV Competency.

“By requiring the software solution to meet our highest standards, Microsoft is assuring customers that these certified solutions work with their investments in Microsoft Dynamics” says Doug Kennedy, vice president, Microsoft Dynamics Partners. “Microsoft congratulates prisma informatik on the software test results and wishes it success in earning the Certified for Microsoft Dynamics designation.”

Especially for users of Microsoft Dynamics NAV und QlikView, prisma informatik GmbH has developed the NAVdiscovery Toolbox. NAVdiscovery tweaks the interactions of both systems and comes with surface templates, script templates and further powerful features.

Unlike other connector solutions NAVdiscovery delivers no pre-built script, but can transfer any custom-built extension within Microsoft Dynamics NAV. Simultaneously, the preparatory technical work for customers can be reduced.

„With the NAVdiscovery Toolbox we created the possibility to apply innovative methods of data discovery quickly and easily within the Microsoft Dynamics NAV system. Particularly the rapid implementation into any given NAV environment, the immediate facilities and the certainty to analyze the correct data and correlations make NAVdiscovery outstanding” says Claudius Malue, manager of prisma informatik GmbH

prisma informatik is solution partner for QlikView and Microsoft Dynamics NAV. As a certified Microsoft Gold Partner in ERP it is adept in process structures of Microsoft Dynamics NAV. In this way, it can support customers in terms of data selection and -data processing. As a QlikView Solution Provider, prisma informatik integrates the business discovery platform in the Microsoft ERP environment and offers further options to connect other applications and data sources.
